

Applicant : James N. Rees
Serial No. : 09/704,221
Filed : November 1, 2000
Page : 2 of 7

Attorney's Docket No.: 09765-020001

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method comprising:
sending a query from a remote system to a server system that processes the query, to provide information comprising data and executable code back to the remote system;
transmitting information from the server system to the remote system by:
transmitting ~~an~~ the executable code from ~~a the~~ the server system to ~~a the~~ the remote ~~location system~~ over a network, the executable code for processing data generated by the server system in response to the query;
generating the data at the server system while ~~as~~ the executable code is being transmitted;
transmitting the generated data to the executable code at the remote ~~location system~~ over the network, the executable code processing the data by:
decoding and uncompressing the data for graphical presentation on a display associated with the remote location; and
displaying the decoded and uncompressed data in a graphical presentation on a display device associated with the remote location.
2. (Currently Amended) The method of claim 1 wherein a client system ~~at is the remote location system, and the client system~~ receives the transmitted executable code and the generated data, and the client system includes a ~~client~~ processor that executes the executable code to process the data.

Applicant : James N. Rees
Serial No. : 09/704,221
Filed : November 1, 2000
Page : 3 of 7

Attorney's Docket No.: 09765-020001

3. (Currently Amended) The method of claim 2 wherein the transmitted executable code is received by the client system before the generated data is received and the executable code causes the client system ~~computer~~ to indicate that client system ~~computer~~ is waiting for the data.

4. (Currently Amended) The method of claim 2 wherein a first portion of the generated data is received by the client system before a second portion of the generated data and the executable code causes the client system to indicate that the first portion has been received before the second portion is received.

5. (Currently Amended) The method of claim 2 wherein a first portion of the generated data is received by the client system before a second portion of the generated data and the executable code causes the client system processor to process the first portion before the second portion is received.

6. (Currently Amended) The method of claim 1 wherein a first portion of the data is generated before a second portion of the data and at least part of the first portion of the data is transmitted while the second portion is being generated.

7. (Currently Amended) The method of claim 1 wherein the query is a travel related query that requests travel related information ~~is transmitted in response to a request for information.~~

8. (Currently Amended) The method of claim 7 wherein the generated data is transmitted in response to a request for data separate from the request for information.

9. (Currently Amended) The method of claim 1 wherein transmitting the information further comprises:

transmitting to the remote location a web page containing a directive to a web browser to request the executable; and

Attorney's Docket No.: 09765-020001

receiving a request for the executable code from the web browser, wherein the executable code is transmitted to the remote location in response to the request for the executable code.

10. (Currently Amended) An article comprising a machine-readable medium which stores machine-executable instructions operable to cause a machine to:

receive a query from a remote system to provide information comprising data and executable code back to the remote system;

transmit information to the remote system responsive to execution of the query by instructions to:

transmitting an the executable code from a the server system to a the remote location over a network, the executable code processing data generated by the server system;

generate generating the data at the server system while the executable code is being transmitted; and

transmitting the generated data to the executable code at the remote system location over the network, with the executable code capable of processing the data by including instructions to:

decode decoding and uncompress uncompressing the data for graphical presentation on a display associated with the remote system location.

11. (Original) The article of claim 10 wherein the instructions cause the machine to generate a first portion of the data before generating a second portion of the data and transmit at least part of the first portion of the data while generating the second portion of the data.

12. (Original) The article of claim 10 wherein the instructions cause the machine to transmit the information in response to a request for information.

Applicant : James N. Rees
Serial No. : 09/704,221
Filed : November 1, 2000
Page : 5 of 7

Attorney's Docket No.: 09765-020001

13. (Original) The article of claim 10 wherein the instructions cause the machine to transmit the data in response to a request for the data separate from the request for information.

14. (Currently Amended) An apparatus comprising:
a storage system storing machine readable instructions and ~~an~~ executable code; and
a server system that executes the computer readable instructions to respond to a request for information by:

receiving a query from a remote system to provide information comprising the executable code and data produced by the server system back to the remote system;
transmitting the executable code to ~~a the remote location system~~ over a network;
generating data while the executable code is being transmitted; and
transmitting the generated data to the executable code at the remote ~~location system~~ over the network, the executable code processing the data by:
decoding and uncompressing the data for graphical presentation on a display associated with the remote ~~location system~~; and
displaying the decoded and uncompressed data in a graphical presentation on a display device associated with the remote ~~location system~~[[.]].

15. (Currently Amended) The apparatus of claim 14 wherein the executable code comprises instructions operable to cause a client processor at the remote location to process the data.

16. (Currently Amended) The apparatus of claim 15 wherein the executable code is received at the remote location before the generated data is received and the executable code causes the client processor to indicate that client processor is waiting for the data.

17. (Currently Amended) The apparatus of claim 15 wherein a first portion of the data is received at the remote location before a second portion of the data and the executable code

Applicant : James N. Rees
Serial No. : 09/704,221
Filed : November 1, 2000

Attorney's Docket No.: 09765-020001

causes the client processor to indicate that the first portion of the data has been received before the second portion is received.

18. (Currently Amended) The apparatus of claim 15 wherein a first portion of the generated data is received at the remote location before a second portion of the generated data and the executable code causes the client processor to process the first portion of the generated data before the second portion is received.

19. (Original) The apparatus of claim 14 wherein a first portion of the data is generated before a second portion of the data and at least part of the first portion of the data is transmitted while the second portion is being generated.

20. (Original) The apparatus of claim 14 wherein the information is transmitted in response to a request for information.

21. (Original) The apparatus of claim 14 wherein the generated data is transmitted in response to a request for the data separate from the request for information.
